EDUCATION

University of British Columbia

Vancouver, BC

4th year Bachelor of Science, Major in Cognitive Systems, Computational Intelligence and Design Sept. 2023 - Present

WORK EXPERIENCE

Automation Engineer Intern

June 2025 - Present

The Growth Compass

Vancouver, BC

- Implemented an n8n workflow to automate lead generation on LinkedIn using Apollo.io B2B lead search URLs through natural conversation.
- Automated URL generation and data formatting in n8n using JavaScript to streamline lead sourcing and Airtable integration. Leveraged SQL to make queries and manipulate this data.
- Engineered a conversational AI flow that collects search parameters to improve the hit rate of individuals aligned with the coaching profile of Growth Compass by 25% compared to prior manual lead sourcing methods.

Teaching Assistant

Sept. 2022 - July 2023

Kumon Steveston

Richmond, BC

- Assisted and taught over 100 children and teenagers to develop math and literacy skills.
- Increased the ELL level of children that me and my team taught by 3-4 months compared to the median time it takes to achieve English proficiency.
- Introduced and strengthened introductory calculus concepts to older students aged 12-16, including basic university-level calculus.

TECHNICAL PROJECTS

Waterlogged | *JavaScript, PHP, SQLite, Laravel, React*

Sept. 2025 - Dec. 2025

- Developed a full-stack citizen science web application using Laravel and PHP.
- Designed and implemented a schema for a SQLite database that meets BCNF standards.
- Built interactive user interfaces using HTML, CSS, and JavaScript, utilized shaden and Tailwind CSS to style the frontend.

DNS Client | *Java, DatagramSocket, TCP, UDP, DNS*

Feb. 2026 - Mar. 2026

- Designed and implemented a DNS protocol client based off RFC 1034 and RFC 1035. Extended this implementation to work with AAAA record types and IPv6 by following RFC 3596.
- Engineered communication between a client and a server using DatagramSocket for UDP data transmission. Implemented a TCP fallback mechanism to handle truncated queries exceeding 512 bytes.

LiDAR Computer Vision ML Glasses | *OpenCV, Pytorch, LabelImg, Embedded Systems*

Nov. 2025 - Present

- Trained and deployed a computer vision pipeline with LiDAR integration that uses a convolutional neural network for object detection, distance sensing, and localization in order to help people with vision impairment.
- Applied transfer learning by fine-tuning a pretrained object detection model on a custom dataset of over 500 images achieving a 91% accuracy and minimizing false negative rate significantly.
- Implemented and fine-tuned a low-pass filter to minimize the effect of background noise on the LiDAR sensor by 87% while still maintaining a range of over 3 meters directly ahead of the individual.

TECHNICAL SKILLS

Languages: Java, Python, C#, C++, C, R, Racket, JavaScript, SQL, Bash

Developer Tools: Github, VS Code, IntelliJ, DrRacket, Kubernetes, n8n, Airtable

Testing: JUnit, GDB, Valgrind, Jira, Wireshark

Libraries, Models & Frameworks: Pandas, PyTorch, Tensorflow, CUDA, Scikit-learn, NumPy
